Calgary, Alberta, Canada — +1 (368) 999-3555 — walid.iut06@gmail.com — [LinkedIn](#) — [Portfolio](#)

Professional Summary

Data Analytics, Business Intelligence, and Data Engineering Consultant with over six years of Canadian experience delivering enterprise analytics, cloud data, BI modernization, and application solutions across government, healthcare, energy, retail, security, and consulting environments. Experienced in designing Power BI semantic/tabular models, developing ETL/ELT pipelines, building analytical datasets and interactive dashboards, integrating complex data sources, and transforming business requirements into scalable data solutions. Strong technical expertise in Power BI, SQL, Python, Microsoft Fabric, Azure, Databricks, Snowflake, Oracle, SQL Server, DAX, Power Query, and modern data engineering technologies. Proven modernization experience includes migrating legacy Business Objects reporting to Power BI, replacing 50+ WebFOCUS reports with Oracle APEX solutions, supporting Oracle-to-Snowflake modernization, and moving on-premises data workloads to Azure. Experienced in enterprise application support, production troubleshooting, data quality, stakeholder engagement, Agile delivery, and AI-assisted development.

Core Competencies

Data Analytics — Business Intelligence — Data Engineering — Power BI Semantic Modeling — Data Modeling — ETL/ELT — BI & Analytics Modernization — Microsoft Fabric — Azure Analytics — Databricks — Snowflake — SQL Development — Data Quality & Governance — Reporting Automation — Application Support — Stakeholder Engagement — Agile / Scrum

Technical Skills

BI & Analytics: Power BI, DAX, Power Query (M), Power BI Service, Tabular Models, Tabular Editor, Power BI Report Builder, SSRS, Tableau, Spotfire

Data & Programming: SQL, T-SQL, PL/SQL, Python, R, Oracle, SQL Server, Azure SQL Database, Snowflake, C#, .NET, Java, JavaScript, React

Cloud & Data Engineering: Microsoft Fabric, Azure Data Factory, Azure Synapse, Azure Data Lake, Databricks, Snowflake, ETL/ELT, Data Pipelines, Data Warehousing

Development & DevOps: Azure DevOps, Git, GitHub, Oracle APEX, Microsoft Power Platform, ServiceNow, SonarQube, Visual Studio

AI & Modern Development: GitHub Copilot, Microsoft 365 Copilot, ChatGPT, Claude Code/Cowork (training), AI-assisted development and troubleshooting

Professional Experience

1. CGI Inc., Canada

Consultant – Data Analytics & Visualization

February 2022 – Present

- Deliver enterprise data analytics, business intelligence, data engineering, BI modernization, cloud data, and application solutions for government, healthcare, energy, retail, security, and commercial organizations.
- Design and develop Power BI semantic models, ETL/ELT pipelines, analytical datasets, interactive dashboards, automated reporting, and cloud-based data solutions using Power BI, SQL, Python, Microsoft Fabric, Azure, Databricks, Snowflake, Oracle, and SQL Server.
- Modernize legacy analytics and reporting environments by assessing existing architectures, data flows, business logic, reporting dependencies, and target-state requirements and translating them into scalable modern solutions.
- Develop data transformation, validation, integration, and quality processes to improve the reliability, usability, maintainability, and performance of enterprise analytical datasets.
- Collaborate with business stakeholders, architects, analysts, developers, and technical teams to gather

requirements, define KPIs and business rules, design solutions, validate outputs, and deliver decision-ready analytics.

- Support production analytics platforms and enterprise applications through troubleshooting, root-cause analysis, testing, deployment, performance improvement, and continuous enhancement using Agile and DevOps practices.
- Apply AI-assisted development tools to accelerate code understanding, troubleshooting, documentation, analysis, and software delivery while maintaining technical validation and human oversight.

Key Consulting Engagements (8)

Energy • Healthcare • Retail • Security • Public Sector

(i) Ovintiv Inc., Alberta — Application Support Developer June 2025 – Present

- Develop, enhance, and support enterprise applications and data-driven solutions using C#, .NET, Java, React, SQL, Python, R, and Microsoft Power Platform in a production energy-sector environment.
- Investigate complex production issues by analyzing application logic, SQL queries, data dependencies, logs, and system behavior to perform root-cause analysis and implement reliable fixes and enhancements.
- Troubleshoot integrated enterprise applications and validate database results, application behavior, and data flows to maintain production reliability and data consistency.
- Design Power Apps and Power Automate workflows to modernize manual business processes and improve operational efficiency.
- Perform automated testing and code-quality analysis using Python and SonarQube and collaborate with cross-functional teams on defect resolution, maintainability, technical improvements, and production stability.
- Support source control, deployment, incident/change management, and controlled production releases using Git and ServiceNow.
- Use GitHub Copilot, Microsoft 365 Copilot, and ChatGPT to support code analysis, troubleshooting, documentation, and development productivity, with additional training in Claude Code and AI-assisted development workflows.

(ii) Calgary Energy Solution Development (enVision), Alberta — Oracle SQL/APEX Developer April 2025 – June 2025

- Modernized a legacy BI reporting environment by replacing more than 50 WebFOCUS reports with Oracle APEX interactive reporting solutions.
- Analyzed legacy report logic, source tables, joins, filters, calculations, and business rules and translated them into maintainable Oracle SQL and APEX solutions while preserving reporting accuracy.
- Developed and optimized Oracle SQL queries for interactive reporting, including joins, aggregations, filtering, reusable business logic, and data transformations across enterprise datasets.
- Performed source-to-target reconciliation and detailed data validation between legacy WebFOCUS outputs and new APEX reports to ensure functional and data consistency during modernization.
- Used ChatGPT Enterprise to assist with understanding complex legacy SQL and WebFOCUS reporting logic while independently validating resulting technical interpretations and implementation.
- Partnered with business stakeholders to gather requirements, resolve discrepancies, validate migrated reports, and deliver modern self-service reporting capabilities.

(iii) Ministry of Health (British Columbia) — Business Intelligence Developer September 2023 – March 2025

- Designed and developed enterprise Power BI dashboards and semantic data models supporting the Provincial Attachment System (PAS) and provincial healthcare decision-making.

- Built reusable analytical models by defining relationships, measures, business rules, transformations, and reporting structures for large and complex healthcare datasets.
- Developed SQL-based analytical datasets and Power BI transformations to improve data retrieval, reporting consistency, model usability, and maintainability.
- Applied Power BI modeling best practices by structuring reusable DAX measures, validating relationships, reducing unnecessary model complexity, and separating transformation and presentation logic where appropriate.
- Performed data validation and quality assurance to ensure accurate KPI calculations and consistent reporting results.
- Collaborated with business stakeholders and technical teams to refine requirements, KPIs, business rules, and reporting outputs and translate evolving needs into scalable analytics solutions.

(iv) Ministry of Health (British Columbia) — Data Developer March 2023 – September 2023

- Developed and supported customized healthcare data-ingestion and transformation solutions used to improve data collection accuracy and downstream analytics.
- Built ETL and transformation logic using JavaScript, JSON Logic, SQL-based data processing, and structured business rules.
- Analyzed source-to-target data flows, implemented validation logic, and investigated data-quality issues before information was consumed by downstream reporting solutions.
- Developed Power BI reporting solutions from collected healthcare data and collaborated with technical teams through Git-based development workflows to support maintainable and controlled releases.

(v) Ovintiv Inc., Alberta — Business Intelligence Developer July 2022 – February 2023

- Modernized legacy enterprise Business Objects reporting into Power BI dashboards, semantic models, and paginated reporting solutions for an energy-sector client.
- Designed Power BI semantic/tabular models using Oracle and SQL Server data sources, defining relationships, reusable measures, transformations, and reporting structures to support consistent enterprise analytics.
- Developed SQL-based reporting datasets, DAX measures, and Power Query transformations and applied data-modeling and visualization best practices to improve reporting performance, maintainability, and user experience.
- Reconciled Power BI results against legacy Business Objects outputs and source-system data to preserve business logic and reporting accuracy throughout the modernization effort.
- Supported SAP HANA as part of the SAP S/4HANA analytical environment supporting enterprise reporting and real-time business information.
- Worked closely with business users to understand legacy reporting dependencies, refine requirements, validate migrated solutions, and support transition to a modern Power BI reporting environment.

(vi) Paladin Security Group Ltd. — Data Engineer June 2022 – August 2022

- Designed and supported cloud-based data pipelines to migrate on-premises enterprise data into an Azure analytics environment.
- Developed data-ingestion, transformation, and validation processes supporting reliable movement of data into Azure Data Lake and Azure analytics services.
- Implemented automated testing and data-quality validation approaches to identify inconsistencies, validate pipeline outputs, and improve confidence in downstream analytical datasets.
- Integrated GitHub with Azure DevOps to strengthen source control, development collaboration, traceability, and delivery practices for cloud data solutions.

- Collaborated with technical teams to improve cloud data architecture, pipeline maintainability, and scalable downstream analytics.

(vii) Lululemon Athletica Canada Inc. — Data Engineer

May 2022 – July 2022

- Supported enterprise data and analytics modernization by contributing to the migration of data from the Oracle Enterprise Landing Area to Snowflake.
- Gathered business and technical data requirements and analyzed source structures, transformation requirements, data dependencies, and target-state needs.
- Contributed to source-to-target data mapping, transformation, reconciliation, and validation approaches required to preserve data quality during cloud migration.
- Proposed scalable cloud data and pipeline solutions using Snowflake and collaborated with engineering teams and stakeholders through Agile delivery practices.

(viii) Ministry of Health (British Columbia) — Data Analyst

February 2022 – May 2022

- Analyzed existing healthcare reporting architecture, business processes, data flows, and stakeholder requirements to identify opportunities for BI and analytics modernization.
- Identified data requirements and gaps and investigated source-system dependencies to support improved analytical datasets and reporting capabilities.
- Created current-state and target-state data-flow diagrams and proposed ETL/ingestion solutions supporting data transformation, validation, and scalable healthcare analytics.
- Proposed the use of modern BI technology for automated analysis and reporting and collaborated with stakeholders to translate business requirements into practical solution concepts.

2. Other Canadian Experience

Ministry of Health, Government of British Columbia

Business Intelligence Developer

June 2020 – February 2022

- Designed, developed, and maintained enterprise ETL pipelines, analytical datasets, data models, and reporting solutions supporting large-scale provincial healthcare analytics.
- Developed SQL queries for data extraction, transformation, profiling, reconciliation, validation, and analytical reporting across large healthcare datasets and multiple source systems.
- Developed Power BI dashboards and interactive reports using SQL, DAX, and Power Query, translating complex healthcare information into decision-ready insights for operational and executive audiences.
- Designed tabular Analysis Services models and OLAP analytical structures, defining relationships, dimensions, measures, and reusable business logic to support consistent enterprise reporting.
- Performed healthcare data profiling, cleansing, validation, and quality assurance using SQL, Python, and R to identify inconsistencies and improve reliability of downstream analytical datasets.
- Partnered with healthcare stakeholders, analysts, program areas, and technical teams to gather business requirements, define KPIs and business rules, validate reporting outputs, and continuously improve analytical solutions.
- Supported production reporting through troubleshooting, root-cause analysis, source-to-report reconciliation, refresh validation, and resolution of data and reporting issues.
- Delivered analytics and BI solutions supporting COVID-19 daily reporting, vaccination and immunization programs, emergency department performance, surgical wait times, mental health and substance-use services, patient experience measurement, virtual care, and national healthcare expenditure reporting.

Education

University of Manitoba

Master of Science (M.Sc.) in Computer Science

Specialization: Data Science, Business Intelligence, and Healthcare Analytics

Winnipeg, Canada

September 2019 – December 2021

Islamic University of Technology (IUT)

Bachelor of Science (B.Sc.) in Computer Science

Specialization: Digital Image Processing and Machine Learning

Gazipur, Bangladesh

December 2006 – November 2010

Professional Training

Microsoft Fabric Analytics Engineer training completed; Microsoft Fabric End-to-End Analytics; Microsoft Fabric Administration, T-SQL, and Data Analytics; Cloud Data Warehousing and Snowflake; Advanced Analytics Using Snowflake; Microsoft Azure Data Fundamentals; Data Engineering on Azure Data Lake Storage; Predictive Analytics; Big Data Analytics; AWS Solutions Architect Associate training; Claude Code and AI-assisted development training.

Selected Analytics & Modernization Highlights

- Modernized legacy Business Objects reporting to Power BI semantic models, dashboards, and paginated reports in an enterprise energy environment.
- Replaced more than 50 legacy WebFOCUS reports with Oracle APEX interactive reporting solutions while preserving underlying business logic and reporting accuracy.
- Supported Oracle-to-Snowflake and on-premises-to-Azure data modernization initiatives involving data ingestion, transformation, validation, testing, and cloud architecture.
- Delivered enterprise analytics and BI solutions across healthcare, government, and energy environments using Power BI, SQL, Python, Azure, Microsoft Fabric, Oracle, SQL Server, Snowflake, and related technologies.
- Applied data quality, semantic modeling, ETL/ELT, automation, production support, and stakeholder collaboration practices to deliver reliable and maintainable analytical solutions.

Awards and Research

University of Manitoba Graduate Fellowship (UMGF); International Graduate Student Entrance Scholarship (IGSES); NSERC CREATE (VADA) Fellowship. Research experience includes data analytics, information visualization, machine learning, healthcare analytics, and visual analytics.

Publications

- 8 peer-reviewed journal publications and 2 international conference proceedings
- Complete publication list available on Google Scholar and Personal Website
