Calgary, Alberta, Canada — +1 (368) 999-3555 — walid.iut06@gmail.com — [LinkedIn](#) — [Portfolio](#)

Professional Summary

Microsoft Certified Fabric Analytics Engineer and Data Analytics, Business Intelligence, and Data Engineering Consultant with 6+ years of Canadian experience across healthcare, government, energy, retail, security, and enterprise environments. Experienced in Power BI semantic modeling, ETL/ELT, Microsoft Fabric and Azure, SQL/Python, data modeling, cloud analytics, BI modernization, and enterprise application support. Delivered legacy-to-modern transformations including Business Objects to Power BI, 50+ WebFOCUS reports to Oracle APEX, Oracle-to-Snowflake, and on-premises-to-Azure migrations. Strong background in data quality, production support, stakeholder collaboration, Agile delivery, and AI-assisted development.

Certifications

Microsoft Certified: Fabric Analytics Engineer Associate

September 2026

Microsoft — DP-600: Implementing Analytics Solutions Using Microsoft Fabric

Core Competencies

Data Analytics — Business Intelligence — Data Engineering — Microsoft Fabric — Power BI Semantic Modeling — Data Modeling — ETL/ELT — BI & Analytics Modernization — Azure Analytics — Databricks — Snowflake — SQL Development — Data Quality & Governance — Application Development & Support — Stakeholder Engagement — Agile / Scrum

Technical Skills

BI & Analytics: Power BI, DAX, Power Query (M), Power BI Service, Tabular Models, Tabular Editor, Power BI Report Builder, SSRS, Tableau, Spotfire

Data & Programming: SQL, T-SQL, PL/SQL, Python, R, Oracle, SQL Server, Azure SQL Database, Snowflake, C#, .NET, Java, JavaScript, React

Cloud & Data Engineering: Microsoft Fabric, OneLake, Lakehouse, Data Factory, Azure Data Factory, Azure Synapse, Azure Data Lake, Databricks, Snowflake, ETL/ELT, Data Pipelines, Data Warehousing

Development & DevOps: Azure DevOps, Git, GitHub, Oracle APEX, Microsoft Power Platform, ServiceNow, SonarQube, Visual Studio

AI & Modern Development: GitHub Copilot, Microsoft 365 Copilot, ChatGPT, Claude Code/Cowork (training), AI-assisted development and troubleshooting

Selected Professional & Modernization Highlights

- **Enterprise Application Development & Support:** Develop and support production applications at Ovintiv using C#/.NET, Java, React, Python/R, SQL, and Power Platform, delivering bug fixes, enhancements, new features, workflow automation, debugging, root-cause analysis, testing, and controlled releases.
- **BI Modernization:** Modernized legacy Business Objects reporting into Power BI semantic models, dashboards, and paginated reports for enterprise energy analytics.
- **Legacy Reporting Modernization:** Replaced 50+ WebFOCUS reports with Oracle APEX interactive solutions while preserving business logic and validating reporting accuracy.
- **Cloud & Data Modernization:** Contributed to Oracle-to-Snowflake and on-premises-to-Azure migrations involving data integration, transformation, validation, testing, and target-state architecture.
- **Provincial Healthcare Analytics:** Delivered BC Ministry of Health analytics supporting COVID-19, vaccination, emergency departments, surgical wait times, mental health, patient experience, virtual care, and healthcare expenditure reporting.

Professional Training & Continuous Learning

Microsoft Fabric End-to-End Analytics; Microsoft Fabric Administration, T-SQL, and Data Analytics; Cloud Data Warehousing and Advanced Analytics with Snowflake; Microsoft Azure Data Fundamentals; Data Engineering on Azure Data Lake Storage; Predictive and Big Data Analytics; AWS Solutions Architect Associate training; Claude Code and AI-assisted development training.

Professional Experience

1. CGI Inc., Canada

Consultant – Data Analytics & Visualization

February 2022 – Present

- Deliver enterprise analytics, BI, data engineering, modernization, and application solutions across government, healthcare, energy, retail, security, and commercial environments.
- Design Power BI semantic models, ETL/ELT pipelines, analytical datasets, dashboards, and cloud data solutions using SQL, Python, Microsoft Fabric, Azure, Databricks, Snowflake, Oracle, and SQL Server.
- Modernize legacy analytics and applications by translating business requirements, data flows, reporting dependencies, and target-state needs into scalable solutions with strong data quality and validation practices.
- Collaborate with business and technical stakeholders while supporting production systems through troubleshooting, root-cause analysis, testing, controlled deployment, Agile/DevOps practices, and AI-assisted development.

Key Consulting Engagements (8)

Energy • Healthcare • Retail • Security • Public Sector

(i) Ovintiv Inc., Alberta — Application Support Developer

June 2025 – Present

- Develop and support enterprise production applications using C#/.NET, Java, React, Python, R/Shiny, SQL, and Microsoft Power Platform, delivering bug fixes, enhancements, new features, and workflow automation.
- Perform debugging and root-cause analysis across application logic, logs, SQL/database dependencies, integrations, and system behavior to resolve production incidents and recurring issues.
- Develop and execute automated testing and code-quality validation using Python and SonarQube, supporting reliable fixes and production stability.
- Support Git-based source control, controlled deployments, release validation, and incident/change processes using Git and ServiceNow in collaboration with cross-functional teams.
- Use GitHub Copilot, Microsoft 365 Copilot, and ChatGPT for code analysis, troubleshooting, documentation, and development productivity, with additional Claude Code training.

(ii) Calgary Energy Solution Development (enVision), Alberta — Oracle SQL/APEX Developer April 2025 – June 2025

- Modernized legacy BI by replacing 50+ WebFOCUS reports with Oracle APEX interactive reporting solutions.
- Analyzed legacy business logic and source dependencies and developed optimized Oracle SQL/APEX solutions using joins, aggregations, transformations, and reusable reporting logic.
- Performed source-to-target reconciliation and validation to preserve reporting accuracy and resolve discrepancies during migration.
- Partnered with stakeholders on requirements and validation and used ChatGPT Enterprise to assist legacy SQL/report analysis while independently validating technical outputs.

(iii) Ministry of Health (British Columbia) — Business Intelligence Developer 2023 – March 2025

September

- Designed Power BI dashboards and reusable semantic models supporting the Provincial Attachment System (PAS) and provincial healthcare decision-making.
- Developed SQL-based analytical datasets, DAX measures, Power Query transformations, relationships, KPIs, and business rules for complex healthcare data.
- Applied semantic-modeling and data-quality practices to improve reporting consistency, maintainability, and accuracy.
- Collaborated with business and technical stakeholders to refine requirements and translate evolving healthcare needs into scalable analytics solutions.

(iv) Ministry of Health (British Columbia) — Data Developer March 2023 – September 2023

- Developed a customized healthcare data-ingestion solution to improve data collection accuracy and downstream analytics.
- Built ETL/transformation and validation logic using JavaScript, JSON Logic, SQL-based processing, and structured business rules.
- Developed Power BI reporting from collected data and supported controlled Git-based development and source-to-target validation.

(v) Ovintiv Inc., Alberta — Business Intelligence Developer July 2022 – February 2023

- Modernized legacy Business Objects reporting into Power BI dashboards, semantic models, and paginated reports for enterprise energy analytics.
- Designed semantic/tabular models using Oracle and SQL Server sources and developed SQL datasets, DAX measures, and Power Query transformations.
- Reconciled modernized Power BI outputs against legacy reports and source data to preserve business logic and reporting accuracy.
- Collaborated with business users on requirements and migration validation and supported SAP HANA within the SAP S/4HANA analytical environment.

(vi) Paladin Security Group Ltd. — Data Engineer June 2022 – August 2022

- Designed and supported cloud data pipelines to transition on-premises enterprise data into an Azure analytics environment.
- Developed ingestion, transformation, automated testing, and data-quality validation processes supporting reliable Azure analytical datasets.
- Integrated GitHub with Azure DevOps to strengthen source control, traceability, collaboration, and delivery practices.

(vii) Lululemon Athletica Canada Inc. — Data Engineer May 2022 – July 2022

- Supported enterprise modernization by contributing to migration of data from the Oracle Enterprise Landing Area to Snowflake.
- Gathered requirements and analyzed source structures, dependencies, transformations, and target-state cloud data needs.
- Contributed to source-to-target mapping, reconciliation, validation, and scalable Snowflake pipeline/architecture design.

(viii) Ministry of Health (British Columbia) — Data Analyst February 2022 – May 2022

- Analyzed healthcare reporting architecture, business processes, data flows, requirements, and gaps to support Primary Care Division modernization.
- Created current-state and target-state data-flow designs and proposed ETL/ingestion, transformation, and validation solutions.

- Collaborated with stakeholders to define scalable BI and automated reporting concepts for modernized healthcare analytics.
-

2. Other Canadian Experience

Ministry of Health, Government of British Columbia

Business Intelligence Developer

June 2020 – February 2022

- Designed and maintained enterprise ETL pipelines, analytical datasets, data models, and reporting solutions supporting large-scale provincial healthcare analytics.
- Developed SQL-based extraction, transformation, profiling, reconciliation, and validation processes and used Python/R for data cleansing, analysis, and quality assurance.
- Developed Power BI dashboards, DAX/Power Query solutions, tabular Analysis Services models, and OLAP structures for operational and executive reporting.
- Partnered with healthcare stakeholders and technical teams to gather requirements, define KPIs/business rules, validate outputs, and translate complex data into decision-ready insights.
- Supported production reporting through troubleshooting, root-cause analysis, source-to-report reconciliation, refresh validation, and resolution of data-quality and reporting issues.
- Delivered analytics supporting COVID-19 cases and vaccination, emergency departments, surgical wait times, mental health and substance use, patient experience, virtual care, and national healthcare expenditure reporting.

Education

University of Manitoba

Winnipeg, Canada

Master of Science (M.Sc.) in Computer Science

September 2019 – December 2021

Specialization: Data Science, Business Intelligence, and Healthcare Analytics

Islamic University of Technology (IUT)

Gazipur, Bangladesh

Bachelor of Science (B.Sc.) in Computer Science

December 2006 – November 2010

Specialization: Digital Image Processing and Machine Learning

Awards and Research

University of Manitoba Graduate Fellowship (UMGF); International Graduate Student Entrance Scholarship (IGSES); NSERC CREATE (VADA) Fellowship. Research experience includes data analytics, information visualization, machine learning, healthcare analytics, and visual analytics.

Publications

- 8 peer-reviewed journal publications and 2 international conference proceedings
